

The Pioneers of Aerospace *and* *The Last Frontier*

By
G.A. Blackburn

We looked up into that cold October night
And watched tomorrow take flight

A slow blinking star moving across the sky
that launched a new future and a race to space.
It was the beginning of a Cosmic odyssey
To Find our place in a Universe of mystery and unknowns

We are the Pioneers who wonder at the skies
And look up for answers to a reality with no ties.
We are The Pioneers of Aerospace born in a Universe
Beyond space and time, explorers searching for
Tomorrow and the next frontier.

We discovered how much we did not know
And learned our lessons of how to grow,
We reached for the stars so far above
By creating friendships from challenge and teams of love.

Our goals were simple, faith in our leaders
Hope in our resolve and trust in each other
To accomplish what could not be done.
We went to the moon and took our place in space.

Pioneers of Aerospace

We found some answers and a legacy to share
With tomorrow and those who now still care.
If you keep looking up into the skies
and into the eyes of the young, you to will see the sign.
It is quite simple, we are all connected in so many ways
and our limits and boundries are all in our minds.

This Universe we live in with all of its questions and problems
Is also the same one that has the answers too.
We all are Pioneers of life searching together
For an eternity that is always right here and now with you

The time for each of us will come
To leave this realm and move on too.
We will enter that Last Frontier with a new promise to explore
The place where we came from, our original home.

We are the Pioneers of Aerospace
Just Passing through to Tomorrow.

In Memory of.....

*Charles, Norman, Shirley, Kay, Larry,
Conley, John, Beverly, Harvey, Richard,
Ed, Jorge, Martin,...*

***Save a Space for us
On this
Last Frontier!***
